Mower maintenance checklist

General list, not a legal list. Your mower's manual sets the real intervals, and it matters most if you use the mower for work. Change the list to fit your machine. Based on: Illinois Extension, Mower Maintenance; Alabama Extension, The 10 steps of lawn mower maintenance (revised November 2023) (read 10 Nov 2026).

Mower / ID _____ **Date** _____ **Reading (km, miles or hours)** _____

Checked by _____ **Signature** _____

Check	Pass	Fail	N/A	Note
Before you mow				
Oil level on the dipstick with the engine cold, filled to the mark and not over it				
Tyre pressure even on every wheel (low pressure in one tyre cuts unevenly)				
Blades sharp and balanced, with a spare set to hand				
Belts: cracks or worn spots				
Battery charged, if your mower has one				
Clippings cleared from under the deck				
Dust and debris cleared from around the engine and battery				
Before your hands go near the blades				
Spark plug lead disconnected (petrol mower) or battery removed (electric mower)				
After mowing				
Deck cleaned of clippings and wiped dry (wet clippings cause rust)				
Fuel				
Fuel stabiliser added if the mower will sit unused for more than 30 days				
Fuel stabiliser added before off-season storage				
Service jobs to log (your manual sets the intervals)				
Engine oil changed (follow the manual's interval in hours)				
Air filter cleaned or replaced				
Fuel filter or primer bulb checked				
Spark plug checked or replaced				
Blades sharpened and re-balanced
